github.com/kupendrav kupendra.netlify.app

Summary

Full-stack and AI product builder focused on shipping production-facing AI applications with Python, FastAPI, Next.js, REST APIs, SQL, and ML workflows. Strong practical interest in agentic systems, product architecture, backend reliability, and customer-visible debugging. Adept at turning user journeys and technical feasibility discussions into highly reliable, secure software structures.

Experience

UnicornSpace [US-LLC]

2024 – Present

Product Strategy & Full-Stack Contributor

Bengaluru, India

- Contribute across product strategy, development, customer experience, and operations to convert user needs into feature flows, product priorities, and implementation direction.
- Work seamlessly on product vision, user journeys, technical feasibility assessment, customer engagement data, and cross-functional product clarity.
- Collaborate across marketing, product engineering, and support workflows to iterate on features and enhance codebase delivery quality.

Glow Logics Solutions Pvt. Ltd.

Feb. 2026 – May 2026

Data Science Intern

Bengaluru, India

- Worked with Python, SQL, exploratory dataset analysis, data cleaning, validation metrics, and Machine Learning algorithms to generate actionable product insights.
- Supported model-oriented development pipelines and communicated complex technical findings to both engineering and non-technical stakeholders.

Selected Projects

AI-Powered Customer Churn Prediction Platform

TypeScript, Python, FastAPI, PostgreSQL, ML

- Built an enterprise-style churn intelligence platform featuring prediction APIs, feature engineering, explainability, retention recommendations, monitoring, and revenue-risk dashboards.
- Implemented secure application layer patterns using JWT/RBAC, local caching, model lifecycle tracking, observability modules, and a deployment-ready CI/CD structure.

ProfileGuard AI | Live

React, TypeScript, Gemini API, LLM Agents

- Built a production-facing AI toolkit for diagnosing Google Business Profile issues using Gemini semantic analysis, automated policy review, legal drafting modules, and customer workflow dashboards.

SecureAudit Toolkit

React, TypeScript, Gemini API, Web Security

- Created an AI-assisted security review tool for cookie verification, payment webhook review, request validation, automated vulnerability analysis, and tamper-evident audit logs.

Lifeline AI | GitHub

Python, ML Deployment, FastAPI, Railway

- Deployed a live AI prediction application connecting optimized model inference, secure API behavior, rigorous deployment validation steps, and an accessible user-facing web interface.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL

Backend / Full Stack: FastAPI, REST APIs, Next.js, React, Database Design, API Debugging, Production Deployment

AI Systems / ML: Machine Learning Pipelines, Model Serving, Model Evaluation, Prompt Engineering, RAG Concepts, LLM Workflows

Product Engineering: Agentic Workflow Design, Usage/Audit Logs, Technical Documentation, Git/GitHub, Railway, Netlify

Education

Visvesvaraya Technological University

July 2022 – July 2026

Bachelor of Technology in Information Science

Bengaluru, India

Hackathons & Certifications

- **MLH Frost Hacks, Hyderabad:** Designed and built a full-stack hospital management app prioritizing real-time doctor-patient communication workflows.
- **HKBK National Level Project Expo 2025:** Presented an interactive fundraising platform designed for end-to-end campaign metrics and secure donor management.
- **Certifications:** Professional Program in Data Science (Glowlogics); Data Science with GenAI (Sheryians); Oracle Certified Data Science Professional.
